During a partner visit in Turkey (15. – 19.01. 2018) we showed a multimedia presentation about energy sources and then we conducted a quiz among all participants of the project meeting. Answers were discussed and verified.

A visit of Polish students in the European Stork Village Pentowoorganic farm (05.06.2018). The students learned how to run such a farm and about human influence on the environment conducive to the settlement of storks.

We visited the Waste Management Plant in Koszarówka (05.06.2018) We listened to a lecture about the segregation of rubbish and verifying it for further processing. We learned about the functioning of this plant and the amount of garbage that is imported every day.

"Earth provides enough to satisfy every man's needs but not every man's greeds" M. Ghandi. We live in a society which promotes consumerism; We purchase what we need for a comfortable lifestyle but are often driven by the desire to have more. Advertising has a big role in "need creation". Advertising techniques convince us that we want a certain product. Naturally our "greedy" behaviour has a negative impact on the planet. So why not create an ad campaign to raise awareness on how our habits clash with the Earth's limited resources? The 5th year class of our Graphics & Communications Course did just that. They condemn the excessive use of plastic which will remain in the environment for hundreds of years, inviting young people to reflect and adopt a sustainable way of life. The primary school "M.Schiazza" in Roseto also worked on a project to clean up the sea. They designed a "cleaning machine" and their parents built it. We presented their work to our CASE partners in March 2017 because European children and teens must work together to create a better world.

6th March 2017 - Official welcome to the CASE partners at primary school and exhibition of the "Transformers machine garbage" project.

Our Fashion Course has made outfits from recycled materials and prepared a fashion show for our CASE friends.

Erasmus+

## CASE Consumer Awareness for Students in Europe

2016-2018

Istituto di Istruzione Superiore "Eugenio Bona"  
Biella, ITALY  
[www.itcbona.biella.it](http://www.itcbona.biella.it)

Eat and drink responsibly

The students explored their feelings linked with food and drinks, discovering their meaning of "good" or "bad food". Do we really know what we feed on? How often what's "tasty" is also good quality food? Through fun experiments they unleashed their senses, trying to recognize the different tastes hidden in food, apart from the usual "good taste experience" which can eventually lead to prefer junk food and drink over good quality one.

How much plastic?

The students had a research about the plastic consumption in our school, designing a questionnaire to get an insight of the amount of plastic which is daily ditched – mostly due to the bottled water and snacks. The team is now submitting the questionnaire in each high school in Biella, to raise awareness of the huge amount of plastic trashed every day – bottles, single-use plastic items, packaging... - to encourage different solutions like fountains in school, plastic-free snack dispenser, severe restrictions on single-use plastic in school canteens.

Casa Zegna –sustainability and social responsibility
