#### European Week of Waste Reduction

From November 20 to 25, 2017 during the European Week of Waste Reduction the gymnasium ran the campaign "Let's not waste – let's share!". During the campaign the CASE project participants invited members of the school community to use unnecessary things once again or to share them with others. Old and unusable bicycles were fixed and given "a second life". The Present Box campaign invited everyone to share household goods, stationery and books. We hope that such a week will become traditional in our gymnasium.

#### Learning not only from textbooks

A technologist from CJSC „Stikloporas“ gave an interesting lesson to gymnasium students during which they were given information about the company which is located near Druskininkai and the product produced there. The representative of the company demonstrated samples of the product produced by his company – granulated expanded foamglass which is a unique, ecological product produced from recycled glass. He also explained the benefits of the product, talked about the possibilities of its use. Students who participated in a different lesson prepared a short presentation in English about the company and the product produced by this company to the Erasmus + project CASE partners during the meeting in our gymnasium on May 26-31, 2017.

#### Eco – creative workshop

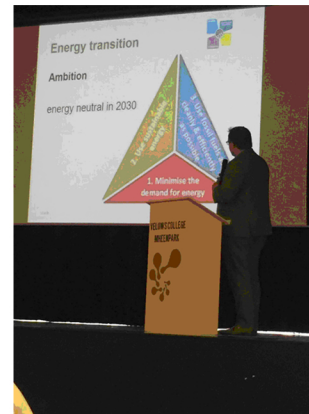

During the meeting of CASE partners on May 26-31, 2017 in Druskininkai, the project participants used secondary materials to create art installations and the elements of decor.

Veluws College Mheenpark  
Apeldoorn, THE NETHERLANDS  
<http://www.veluwscollege.nl>

#### Greencase, Apeldoorn, 15-20 April, 2018

At Veluws College Mheenpark we started with the presentation of the council environment Of Apeldoorn, Mr. Mark Sandman who showed us the policy and mindset for the future about sustainability in the Netherlands and especially the way Apeldoorn is acting on it.

The next day we visited Industriewater in Eerbeek, this company showed us how industry can cooperate in a way of circular economics. The aim of circular economics is to use as few finite raw materials as possible and to reuse resins or waste materials in a production process. Waste from one company can form valuable raw materials for the other company.

After a very nice evening having a vegetarian home made buffet, we said goodbye to each other and we made the wish CASE participants all will spread the word in their own country and environment.

#### Project Activities:

One day event of "Creativity through recycling" took place at TICAL in May 2017. Students exhibited their creativity by repurposing materials. A poster was created for the event; students, parents, locals and directors from Tepebaşı District Directorate of National Education have visited exhibitions. Plastics, old clothes, unused stationary, cans, buttons and old yarns were transformed into shopping bags, pencil holders, pillows, toys and bookcases. The event has been successful in two dimensions - avoiding one's actions of prompt shopping and unfolding creativity.

Workshop on curriculum: CASE is a student-oriented project; students are actors and teachers are guides. Considering this view, we have devoted significant amount of time for working on curriculum at the Short Term Exchange of Students Meeting in Eskişehir, Turkey on 14-19 January 2018. The international groups came up with important ideas and did a substantial contribution to CASE curriculum.

#### Dissemination Event:

International Dissemination Event CASE Project took place in Eskişehir, Turkey 13th of September 2017. The aims of the project, outputs, findings and activities in the first year of CASE have been introduced.
